

Help kids with autism get
the support they need

Diagnose and treat ASD

The **PDD Behavior Inventory™ (PDDBI™)** is an informant-based rating scale designed to assist in the assessment of children ages 1 year, 6 months to 18 years, 5 months who have been diagnosed with an autism spectrum disorder (ASD). Unlike existing assessments for ASD, the PDDBI was developed to assess both problem behaviors as well as appropriate social, language, and learning/memory skills. Standard and extended versions are available (administration time is 20 to 30 minutes and 30 to 45 minutes, respectively). The **PDDBI™ Screening Version (PDDBI™-SV)** takes just 5 to 10 minutes to administer. Both are available in paper and pencil or **online administration and scoring via PARiConnect**.

Also available: The **Autism Spectrum Disorder Decision Tree (ASD-DT)** allows you to use PDDBI scores (for children ages 1 year, 6 months to 12 years, 5 months) to complete the branches of a decision tree that ultimately results in a diagnostic category. PARiConnect reports automatically include the ASD-DT report when appropriate.

Assess executive dysfunction in children with autism

The **Behavior Rating Inventory of Executive Function®**, **Second Edition (BRIEF®2)** assesses executive function behaviors in the school and home environments for children ages 5 to 18 years. Administration time is 10 minutes. Available in paper and pencil or **online administration and scoring via PARiConnect**. The **BRIEF®2 Screening Form** is also available and takes just 5 to 10 minutes to administer. The **BRIEF®2 ADHD Form**, now a part of the BRIEF2 Interpretive Report, uses BRIEF2 scores and classification statistics within an evidence-based approach to predict likelihood of ADHD and determine subtype.

Now on PARiConnect: A new BRIEF2 Score Report, an updated BRIEF2 Interpretive Report, and BRIEF2 Interventions Handouts!
